

名前 _____ 日付 _____ / _____

QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 60 and 70 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。60～70語で要約しなさい。

READING

Traffic lights usually follow fixed schedules, even when the number of vehicles changes greatly during the day. This can make drivers wait at empty intersections while long lines form elsewhere. To address this problem, more cities are introducing AI traffic lights. These systems use cameras and road sensors to study current traffic and change signal timing automatically.

Supporters point to several benefits. First, the systems can reduce traffic jams. When many cars gather on one road, green lights can be extended, while quieter roads receive shorter periods. This helps vehicles move through busy areas more smoothly and may reduce the time drivers spend waiting. In addition, AI traffic lights can give priority to emergency vehicles. The system can detect an approaching ambulance or fire engine and create a series of green lights along its route. As a result, emergency workers may reach people in danger more quickly.

Despite these benefits, critics point out a major drawback. Installing cameras, sensors, communication equipment, and control software requires considerable public spending. The systems also need regular maintenance and technical updates. Smaller cities may struggle to cover these continuing costs, especially when equipment breaks or must be replaced.

要約は2ページ目に書きます。記事の和訳は載せていません（読む練習のため）。答え合わせはQRから。
