

名前 _____ 日付 _____ / _____

QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 60 and 70 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。60～70語で要約しなさい。

READING

Fresh water is becoming harder to manage in some cities because of population growth and changing weather patterns. At the same time, heavy rain can quickly overwhelm drainage systems. In response, rainwater utilization systems are spreading. These systems store water from roofs and other surfaces for later use, such as cleaning or watering plants.

Supporters point to some advantages. To begin with, stored rainwater can replace tap water for tasks that do not require drinking-quality water, lowering demand on public supplies. This can be especially useful during dry periods or when a city's water resources are under pressure. Another advantage is that storage tanks keep some rain from immediately entering streets and drains. By slowing the flow of water during storms, they can reduce pressure on drainage networks, which reduces flood damage.

On the other hand, critics identify problems. Installing tanks, pipes, filters, and pumps can be expensive, particularly in older buildings that require major changes. Property owners may also need to pay for inspections, repairs, and replacement parts. Furthermore, hygiene problems may occur if water is stored or treated improperly. Bacteria, insects, or harmful substances can enter the system, and contaminated water might be used in unsuitable ways.

要約は2ページ目に書きます。記事の和訳は載せていません（読む練習のため）。答え合わせはQRから。
