

名前 _____ 日付 _____ / _____

QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 60 and 70 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。60～70語で要約しなさい。

READING

Forests cover large areas that are often difficult for people to inspect regularly. Damage caused by fires, disease, illegal logging, or changing weather may therefore remain unnoticed for some time. A new approach uses artificial intelligence (AI) to examine information from satellites, drones, cameras, and ground sensors. This method of monitoring forest conditions is attracting growing attention.

Supporters say AI monitoring is beneficial. This is because unusual changes in forests can be detected sooner. Some forests are in remote areas that people cannot inspect frequently. Other changes are small or spread across wide areas and may be missed during occasional visits. AI systems, however, can repeatedly compare images and identify signs such as changes in tree color, temperature, or density.

Nevertheless, critics raise some concerns. For example, forests in remote areas may need communication networks, sensors, and regular technical support. However, the necessary equipment can cost a lot of money to introduce and maintain. Another concern is that AI may produce incorrect information. Clouds, shadows, seasonal changes, or faulty equipment can be mistaken for serious problems. False warnings may waste time and money, while missed warnings could delay action against real damage and allow it to spread.

要約は2ページ目に書きます。記事の和訳は載せていません（読む練習のため）。答え合わせはQRから。

スマホで読み取ると、書いた英文をその場でAIが添削します。
