

名前 _____ 日付 _____ / _____

QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 60 and 70 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。60～70語で要約しなさい。

READING

Dry leaves, fallen branches, and dense vegetation can accumulate in forests and provide dangerous fuel for severe wildfires. To reduce this material, trained teams carefully burn selected forest areas under planned conditions. This practice, often called prescribed burning, is carried out by specialists when weather, wind, moisture, and soil conditions are considered suitable.

Supporters describe important benefits of prescribed burning. Removing some dry material can make future wildfires less intense, making it easier for firefighters to control them. Planned fires are kept within prepared boundaries and are monitored carefully by specialists with firefighting equipment nearby. In addition, burning can support certain plants whose seeds are released or germinate more successfully after exposure to heat. It may restore natural cycles in ecosystems that have developed with regular fire.

Nevertheless, opponents express concerns. Smoke can spread beyond the forest and worsen air quality in nearby communities. It may cause breathing problems for children, older people, and residents with asthma or other health conditions. There is also a risk that the fire will escape. Sudden wind changes, unusually dry vegetation, or equipment failures could carry flames across control lines and damage forests, homes, or other land outside the planned area.
