

名前 _____ 日付 _____ / _____

QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 60 and 70 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。60～70語で要約しなさい。

READING

Natural reefs give fish and other marine species places to feed, hide, and reproduce, but pollution, storms, and coastal development have damaged many of them. Some groups are responding by creating artificial reefs from recycled concrete, metal, and other suitable materials. Before being placed on the seabed, the objects are shaped, cleaned, and inspected for use in the ocean.

Supporters say artificial reefs have several benefits. The structures provide additional protected spaces for fish, shellfish, and other organisms, especially in areas where natural habitats have declined. Their holes and rough surfaces create places where smaller creatures can avoid predators. They also give discarded materials a second use. Concrete blocks and suitable industrial objects can become part of a reef instead of being sent to disposal sites.

On the other hand, critics point out possible risks. If recycled objects are not inspected and cleaned properly, paint, oil, chemicals, or metals may enter the water and harm nearby organisms. Even small amounts can remain in the marine environment for long periods. Artificial reefs can also have a negative impact on existing ecosystems. They may draw in harmful non-native species or change the way living things in the area depend on each other for food at the expense of native species.

要約は2ページ目に書きます。記事の和訳は載せていません（読む練習のため）。答え合わせはQRから。
