

名前 _____ 日付 _____ / _____

QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 60 and 70 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。60～70語で要約しなさい。

READING

Producing food creates greenhouse gases at many stages, including farming, processing, packaging, and transportation. However, shoppers cannot usually tell how much greenhouse gas was emitted before an item reached a store. Carbon labels are being developed to provide this information. The labels show an estimate of a product's emissions, often by using a number, letter, or color on its package.

Supporters believe carbon labels can have positive effects. Shoppers who want to protect the environment can compare similar products and select one with lower emissions. This allows environmental concerns to influence everyday choices. In addition, food companies may try to improve their labels. For example, they may change how ingredients are grown and products are made in order to lower the emissions connected with them.

However, critics express concerns about accuracy. The amount of carbon produced can differ greatly between farms and factories. Therefore, companies may not have complete information about every stage. Moreover, organizations sometimes use different methods to make their calculations. As a result, two similar labels may be based on different standards. Shoppers could then believe one product is better for the environment even when a fair comparison is not possible.

要約は2ページ目に書きます。記事の和訳は載せていません（読む練習のため）。答え合わせはQRから。
