## QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 60 and 70 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。60～70語で要約しなさい。

## READING

Streetlights are often kept on at full brightness throughout the night, even when roads and paths are empty. Some local governments are installing motion sensors on lights to change this pattern. The lamps remain dim when no movement is detected and become brighter when a pedestrian, bicycle, or vehicle approaches. After the person or vehicle passes, the lights return to a lower level.

Supporters believe these systems are beneficial. Dimming lights when streets are unused can reduce the electricity needed for public lighting. This can lower operating expenses and reduce emissions when the electricity comes from fossil fuels. Another benefit is that unnecessary brightness is reduced during quiet hours. Less light may enter nearby homes or disturb insects and other animals that depend on natural darkness for feeding, movement, and their normal daily cycles.

However, critics have concerns. Sensors may have blind spots or fail to work properly, causing them to miss approaching pedestrians. As a result, a streetlight may remain dim even when someone is nearby. This could create dangerous situations because pedestrians may have difficulty seeing obstacles or being noticed by drivers and cyclists in poorly lit areas.

要約は2ページ目に書きます。記事の和訳は載せていません（読む練習のため）。答え合わせはQRから。
