

名前 _____ 日付 _____ / _____

QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 60 and 70 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。60～70語で要約しなさい。

READING

Large numbers of used tires are discarded every year, creating a waste problem in many countries. One way to use this material is to process old tires into small pieces of rubber and mix them with asphalt for road construction. This type of pavement is already being used in some areas as an alternative to ordinary asphalt.

Supporters point to several advantages. Large amounts of rubber from old tires can be added to road materials. Therefore, fewer tires need to be treated as waste. There is another benefit. Rubber can make pavement more resistant to cracking and damage caused by traffic or temperature changes. As a result, roads may remain in good condition longer than those made with conventional asphalt.

That said, critics point out some problems. Used tires must be broken into small, uniform pieces and carefully separated before being mixed with asphalt. These techniques can make the installation process more expensive than that of ordinary asphalt. Moreover, once rubber is combined with asphalt, the resulting material becomes more complex. When roads are later removed, it may therefore be difficult to process the old pavement back into ordinary asphalt for further use.

要約は2ページ目に書きます。記事の和訳は載せていません（読む練習のため）。答え合わせはQRから。
