

名前 _____ 日付 _____ / _____

QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 60 and 70 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。60～70語で要約しなさい。

READING

As extreme weather events such as heavy rain, floods, and storms become more frequent, governments and meteorological organizations are turning to AI technology to improve the accuracy and speed of weather predictions. Under such circumstances, AI-based weather forecasting systems have been increasingly used around the world. These systems use artificial intelligence to analyze vast amounts of data collected from satellites, sensors, and past weather records.

Supporters argue that AI-based forecasting offers several important advantages. Studies have shown that the amount of weather data available today is much greater than in the past. By processing such large and complex datasets, AI can identify patterns that are difficult for humans to detect. This leads to more accurate predictions of weather changes. Moreover, such accurate systems can provide people, local governments, and emergency services with earlier warnings to prepare for natural disasters in advance. This can improve disaster preparedness.

On the other hand, some concerns have been raised about AI-based forecasting systems. Since AI learns from past weather data, it may have difficulty predicting unusual weather patterns caused by climate change. Under such conditions, the system may produce unreliable results. Consequently, such results could cause confusion among people who receive the information.
