名前 _____ 日付 _____／_____

QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 90 and 110 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。90〜110語で要約しなさい。

READING

Generative AI systems are developed by analyzing enormous collections of text, images, and other digital material. Much of this content is gathered from the Internet, where copyrighted works may be included alongside material that is freely available. In some cases, creators may not know that their work has been used for training or may not have given clear permission for such use. This has raised concerns that writers, artists, and other rights holders are losing control over how their creations are used in the development of commercial AI systems.

The issue can have consequences for both creators and technology companies. If original works contribute to systems that can produce competing content, some creators worry that their income and motivation to continue producing new work could decline. At the same time, uncertainty over copyright rules can create legal and financial risks for AI developers. Companies may face lawsuits or be forced to change how they collect and process training material, making development more expensive and less predictable. A lack of clear rules can therefore create tension between encouraging innovation and protecting the interests of people whose work helps supply training data.

One proposed response is to require AI companies to disclose more information about the material used for training and to pay licensing fees when copyrighted works are included. Such rules could give rights holders greater control and provide compensation for commercial use. However, implementing them would be difficult. Training datasets may contain millions of items from many countries, making it hard to identify every owner and obtain permission individually. Detailed licensing requirements could also impose large administrative and financial costs. Major technology companies may be able to absorb these expenses, but smaller developers could struggle, potentially reducing competition and making it harder for new firms to enter the AI market.

要約は2ページ目に書きます。記事の和訳は載せていません（読む練習のため）。答え合わせはQRから。

スマホで読み取ると、書いた英文をその場でAIが添削します。

名前 _____　日付 _____／_____

1ページ目の記事を、90〜110語の英語で要約します。記事の言葉をそのまま写さず、自分の言葉で言い換えましょう。

解答欄

目安 90〜110語（1行に8〜9語ほど）

枠の中に書いてください

メモ（要点を3つ書き出してから、まとめます）

スマホで読み取ると、書いた英文をその場でAIが添削します。
