名前 _____ 日付 ____／____

QUESTION

Read the article below and summarize it in your own words as far as possible in English. Summarize it between 90 and 110 words.

以下の記事を読み、できる限り自分の言葉を使って英語で要約しなさい。90〜110語で要約しなさい。

READING

Large glass windows are common in modern cities because they provide natural light and create open-looking building designs. However, glass can reflect the sky, trees, and other vegetation, making the surface appear to be part of the surrounding environment. Birds may fail to recognize the window as a solid barrier and fly toward the reflected image at high speed. These collisions can occur on office towers, apartment buildings, schools, and other structures, especially where large glass surfaces are located near parks or planted areas.

The consequences can be significant. Many birds die immediately after striking windows, while others suffer injuries that prevent them from surviving later. Migratory species may be especially vulnerable because they pass through unfamiliar urban areas in large numbers and may encounter many reflective buildings along their routes. If collisions occur repeatedly in the same places, they can contribute to declines in local or regional bird populations. The problem is difficult to notice because dead or injured birds may be removed quickly by predators, cleaning staff, or weather, causing the true scale of mortality to be underestimated.

One response is to introduce bird-safe design standards for new buildings and renovations. Windows can use visible patterns, coatings, screens, or external structures that help birds recognize glass as an obstacle rather than open space. These measures can significantly reduce collisions without eliminating windows entirely. However, applying them to every existing building can be expensive, especially when large areas of glass must be replaced or modified. Some designs may also reduce the amount of daylight entering a building or alter its appearance in ways owners and architects dislike. As a result, bird-safe construction can lower wildlife deaths, but wider adoption may require balancing environmental benefits with cost and design priorities.

要約は2ページ目に書きます。記事の和訳は載せていません（読む練習のため）。答え合わせはQRから。

名前 _____　日付 _____／_____

1ページ目の記事を、90〜110語の英語で要約します。記事の言葉をそのまま写さず、自分の言葉で言い換えましょう。

解答欄

目安 90〜110語（1行に8〜9語ほど）

枠の中に書いてください

メモ（要点を3つ書き出してから、まとめます）

スマホで読み取ると、書いた英文をその場でAIが添削します。
